

VOICE REQUEST

“Focus on the panda.”

The yellow reticle is the focus point Android applied on-device.

One spoken goal.
A safe camera plan.

PHOTO HELPER

Speak in outcomes, not camera settings.

PROBLEM

People speak in outcomes.
Cameras expose controls.

“Make it brighter” still requires exposure, focus and timer decisions.

SOLUTION

Say the result.
Photo Helper handles the controls.

Voice, the live frame and device telemetry become a bounded camera plan.

HOW IT WORKS

AI proposes. The phone decides.

The model proposes; Android validates and executes.

AI proposes

voice + frame → plan

Phone decides

validate → execute

Human controls

start → stop → reset

WORKBUDDY'S ROLE

WorkBuddy accelerated implementation and strengthened product quality.

HY3 implementation · specialist review across architecture, UX and QA

SMART MODE

“Make this shot look nicer”

Tap ✨: Qwen safely adjusts exposure, colour, framing or focus.
